🧩 Project Overview

🔐 1. User Registration

- Fields: `username`, `email`, `password`, `confirmPassword`
- Validation:
  - All fields required
  - Email format check
  - Password = Confirm Password
  - Unique email in DB

🔑 2. User Login

- Fields: `username/email`, `password`
- After successful login → Redirect to **Home Page**
- JWT/localStorage used for session management

🏠 3. Home Page (After Login)

- Product Cards fetched from backend API
- Each card shows:
  - Product image
  - Product title
  - Price
  - Discount
  - “Add to Cart” button

🛒 4. Add to Cart System

- User can add or remove products
- Cart stored in backend with user ID reference
- “Remove from Cart” button available

💰 5. Cart Total Calculation

- Auto calculate total price + discount
- Show subtotal and final payable amount
- Dynamic update when item removed or added

🔍 6. Search & Filter

- Search bar for product name
- Optional: filter by price range / discount

👤 7. User Profile Page

- Show user info (username, email)
- Option to edit/update basic info (like username or password)

8. Logout

- JWT/localStorage clear
- Redirect back to Login page

9. Admin Panel (Next Task)

- Temporary use Postman to add products
- Fields: `title`, `price`, `discount`, `imageUrl`, `description`
- Image URLs fetched from **Amazon product listings**
